

The circuit diagram shows a differential amplifier 1000. It consists of two npn transistors 210 and 410, two PMOS transistors 110 and 310, and two current sources 50a and 54a. The input Vin is connected to the gates of 110 and 310. The output Vout is taken from the common source node. The circuit is labeled 1000A and 1000B.
